Aurlynn: API integration work summary

Work done on the admin console and the customer dashboard against the new backend (https://aurlynn.nyxtry.in). Pages are listed with their local URL (http://localhost:5173). All entries use the live API unless stated under "Still demo data". The screens were checked against the API, lint and a production build; a browser click-through test is still needed.

PART 1: ADMIN SIDE (admin console)

Module: Overview

Page	URL	What was done	Live API
Platform overview	`http://localhost:5173/admin/overview`	Replaced the old placeholder figures with real call data: calls, minutes, success rate, active customers, cost, calls-per-day chart, top customers and top outcomes. Added a 7 / 30 / 90 day switch.	`GET /analytics/api/v1/admin/analytics/overview`

Module: Customers

Page	URL	What was done	Live API
Customer: Call activity (new tab)	`http://localhost:5173/admin/customers/:id?tab=activity`	New tab showing one customer's calls, minutes, success rate, calls per day, per-agent table and outcomes.	`GET /analytics/api/v1/admin/analytics/customers/{tenantId}`
Customer: Agents (new tab)	`http://localhost:5173/admin/customers/:id?tab=agents`	New read-only list of that customer's agents with status and live version.	`GET /flow/api/v1/admin/agents?tenant_id=`
Customer: Audit log (new tab)	`http://localhost:5173/admin/customers/:id?tab=audit`	New tab with that customer's changes, filterable by area and action.	`GET /analytics/api/v1/admin/audit-log?tenant_id=`
Customer: Invoices	`http://localhost:5173/admin/customers/:id?tab=invoices`	Added Download PDF in the invoice detail window.	`GET /billing/api/v1/admin/customers/{id}/invoices/{id}/pdf`
Customer: Settings (LLM list)	`http://localhost:5173/admin/customers/:id?tab=settings`	Fixed the LLM provider catalog to its new location (the old path returns 404).	`GET /flow/api/v1/admin/catalog/llm-providers`

Module: Agents

Page	URL	What was done	Live API
Agents	`http://localhost:5173/admin/agents`	Rebuilt on the new admin list: filter by customer, status and search on the server, paging, status counts, details drawer. Create / edit / pause / delete were removed because the backend has no admin routes for them.	`GET /flow/api/v1/admin/agents?tenant_id=&status;=&q;=`

Module: Audit

Page	URL	What was done	Live API
Audit log	`http://localhost:5173/admin/audit`	Rewritten for the real audit fields: time, actor, action (for example calls.update), item, customer, area. Filters: customer, area, action prefix. Click Details to see method, route, status and IP. Actor names resolved for staff; customers resolved by name.	`GET /analytics/api/v1/admin/audit-log`

PART 2: CLIENT SIDE (customer dashboard)

Module: Account and billing

Page	URL	What was done	Live API
Calls-allowed banner (every page)	`http://localhost:5173/ (top of all customer pages)`	New banner: "Calls are paused" with the server message when there is no plan, minutes are used up or the balance is low; a notice when extra minutes are paid from the wallet.	`GET /billing/api/v1/customer/billing/entitlements`
Plan	`http://localhost:5173/settings/plan`	Paid plans now open the checkout page and handle the return (completed / cancelled / expired). Free plans switch directly.	`POST /billing/.../checkout-session; GET /billing/.../checkout-sessions/{id}`
Page	**URL**	**What was done**	**Live API**
Invoice detail	`http://localhost:5173/settings/invoices/:id`	Download PDF now works.	`GET /billing/api/v1/customer/billing/invoices/{id}/pdf`
Privacy	`http://localhost:5173/settings/privacy`	Moved to the analytics service. Real settings: record calls, recording notice, keep transcripts, mask data, retention. Delete-a-caller request with result summary and a history list.	`GET/PUT /analytics/.../privacy-settings; POST privacy/delete-request; GET privacy/delete-requests`
Activity log	`http://localhost:5173/settings/activity`	Same real-field table as the admin audit log, with area and action filters and staff names.	`GET /analytics/api/v1/customer/audit-log`
Exports and scheduled reports	`http://localhost:5173/settings/exports`	Calls and daily-figures CSV with authenticated download; scheduled reports saved in the real format. Emails are not sent until an email provider is connected.	`POST /analytics/.../exports; GET exports/{id}/download; GET/PUT scheduled-reports`
Notification bell	`http://localhost:5173Top bar (all pages)`	Reads the new list format and added Mark all read.	`GET /integration/.../notifications; POST notifications/read-all`

Module: Agents

Page	URL	What was done	Live API
Agent test drawer	`http://localhost:5173/agents/:id (Test button)`	New Published chat mode (Scripted replies label, knowledge passages, outcome and link to the call). Voice test with browser speech. Call my phone with status polling.	`POST /orchestrator/.../text-sessions, messages, end; POST /flow/.../test-session, test-call`
Agent Settings tab	`http://localhost:5173/agents/:id/settings`	Caller memory now has retention, what to remember and greet-returning-callers.	`GET/PUT /flow/.../agents/{id}/memory-settings`
Page	**URL**	**What was done**	**Live API**
Agent Channels tab	`http://localhost:5173/agents/:id/channels`	Chat settings now use real fields: enabled, greeting, reply length, typing delay, emojis, hand-over words, after-hours message.	`GET/PUT /flow/.../agents/{id}/chat-settings`

Module: Knowledge and Tools

Page	URL	What was done	Live API
Knowledge base	`http://localhost:5173/knowledge, /knowledge/:id`	Source status (waiting, processing, ready, failed with reason), passage count, polling every 2.5 s, re-sync, authenticated file upload, real search with match score. Website source fetches one page.	`POST/GET /flow/.../knowledge-bases/{id}/sources; PUT .../file; POST .../query; POST .../resync`
Tools	`http://localhost:5173/tools`	Fixed Test to send "arguments" (it always reported missing arguments before). Parameters are converted to the schema the API expects. Shows status, duration, error and body.	`POST /flow/api/v1/customer/tools/{id}/test`

Module: Calling

Page	URL	What was done	Live API
Campaigns list	`http://localhost:5173/campaigns`	New list page (was a placeholder): status, progress, numbers, successful.	`GET /outbound/api/v1/customer/campaigns`
New campaign wizard	`http://localhost:5173/campaigns/new`	Create, dry-run validate, upload, estimate, then start now or schedule. Real calling-hours and retry settings.	`POST campaigns; POST contacts/validate; POST contacts; GET estimate; POST start`
Page	**URL**	**What was done**	**Live API**
Campaign detail	`http://localhost:5173/campaigns/:id`	Live counts, waiting-reason banner (plan limit reached resumes on its own), numbers with attempts / retry / remove, analytics, settings, duplicate, cancel, CSV results.	`GET campaigns/{id}, /contacts, /results?format=csv, /analytics/*`
Contacts	`http://localhost:5173/contacts, /contacts/:id`	Import in chunks of 1000, list counts, custom fields, real timeline. Do-not-call toggle now uses the do-not-call list. Delete removed (no backend).	`POST/GET /outbound/.../contacts, contact-lists, contact-fields, dnd-numbers`
Calling rules	`http://localhost:5173/settings/calling-rules`	Converted to the real schedule format and added a time zone.	`GET/PUT /outbound/.../calling-rules`
Workflows: Triggers and Scheduled calls	`http://localhost:5173/workflows`	Trigger mapping uses incoming JSON paths; webhook URL and test payload fixed; run log statuses; scheduled calls link to the resulting call.	`GET/POST/PATCH /outbound/.../call-triggers; GET/POST/DELETE scheduled-calls`
Phone numbers	`http://localhost:5173/numbers`	Buy by type and area code; numbers list shows the answering agent; own carrier supports SIP, Twilio, Plivo, Exotel with test and remove.	`GET /telephony/.../available; POST purchase; /telephony/.../connections`
Number routing and holidays	`http://localhost:5173/numbers/:id`	Open-around-the-clock option, after-hours agent / message / voicemail / forward, simulator result, holidays.	`GET/PUT /inbound/.../phone-numbers/{id}/routing; POST routing/simulate; GET/PUT routing/holidays`
Live calls	`http://localhost:5173/calls/live, /inbound`	Uses the outbound live-calls route; new Live sessions table with transcript viewer; listen / take over explain that live audio is not connected.	`GET /outbound/.../calls/live; GET /orchestrator/.../live-sessions`

Module: Connect

Page	URL	What was done	Live API
Integrations catalog	`http://localhost:5173/integrations`	New catalog page (was a placeholder) grouped CRM / Calendar / Automation.	`GET /integration/.../integrations/catalog`
Integration detail	`http://localhost:5173/integrations/:provider`	Connect by API key or OAuth redirect; one-time webhook secret; contacts sync settings, field mapping, sync now and log; call logging; caller lookup; CRM events; calendar booking and appointments.	`POST .../{provider}/connect; GET status, fields, sync-log; PUT sync-settings, mapping, call-logging, lookup-settings`
Page	**URL**	**What was done**	**Live API**
WhatsApp	`http://localhost:5173/channels/whatsapp`	Connect, templates with review status, answering agent.	`GET/POST /integration/.../channels/whatsapp, templates; PUT .../{id}/agent`
Inbox	`http://localhost:5173/inbox`	Real statuses (agent / staff / closed), take over and release, template replies with placeholder values.	`GET /integration/.../conversations; POST messages, takeover, release`

Page	URL	What was done	Live API
Broadcasts	`http://localhost:5173/broadcasts`	Needs a connected number and template values; real delivery stats; send now.	`POST/GET /integration/.../broadcasts`
Deploy with code	`http://localhost:5173/developers`	API keys with real fields (prefix, permissions, expiry) and key-exchange instructions; webhooks with real status values, event list, description and deliveries.	`GET/POST/DELETE /auth/.../api-keys; /integration/.../webhooks`

Module: Analytics

Page	URL	What was done	Live API
Analytics	`http://localhost:5173/analytics`	All tabs converted to real data: overview, outcomes and funnel, usage and cost, quality and sentiment, best-time heat map, campaigns and numbers. Topics, extracted fields and drop-off removed (not available yet). Saved views and export work.	`GET /analytics/.../analytics/{summary, timeseries, agents, outcomes, funnel, usage, cost, quality, sentiment, heatmap, campaigns, phone-numbers}`

3. Shared changes (all pages)

- Added the orchestrator service to the app configuration and dev proxy.
- Plain-text 429 rate-limit responses now show "Too many attempts, try again in N seconds".
- A 503 live_audio_unavailable is shown as a message instead of being treated as a missing route.
- Validation errors from the API now list which field is wrong.
- Added an authenticated download helper used for PDFs and CSVs.

4. Still demo data (backend has no route)

- Agent teams (/workflows): backend route missing.
- SMS tab (/channels/whatsapp): backend route missing.
- Agent web call widget and chat bubble (/agents/:id/channels): backend route missing.
- Agent drop-off and latency insights (/agents/:id/insights): backend says not available yet.

5. Pending

- QA scorecards and call review (/review, /calls/:id): the backend uses different field names; screens not yet updated.
- Agent name on the call list and call detail (/calls, /calls/:id): the API returns only the agent id.
- Call Flag button (/calls/:id): the backend ignores the flagged setting; remove the button or fix the backend.
- Not re-checked against the live API: Credits (/settings/credits), Sub-accounts (/settings/sub-accounts), Custom voices (/settings/voices), Notification settings (/settings/notifications), Home dashboard (/).
- Backend gaps: no contact delete, no A/B campaign variants, saved CRM field mapping cannot be read back, no list-exports route, no Google Sheets or helpdesk integrations, no realtime audio, no email / SMS delivery, no recordings.

6. Test data left on the dev company (owner@acme.test): please clean up

- A demo phone number +918011492085, assigned to the agent "Front Desk Assistant".
- Sub-account "zz-probe" (no delete route) and a Rs 100 wallet top-up.
- Draft campaign "zz-probe-campaign"; contacts "Zz Probe" and "Zz Probe 2"; 3 sample contacts from the Pipedrive sync.
- Connected Pipedrive and pending HubSpot connections.
- A WhatsApp demo number, template, conversation and broadcast.
- A typed test conversation in the call log and a few audit-log entries.
